

EXHIBIT A
LISTING OF ALL CLAIMS AND AMENDMENTS
(05-25-2006)

Amendments to the Claims

Claim 1 (currently amended)

1. A support system for supporting a product for retail display from a metal structure comprising a substantially horizontal top surface and a substantially vertical side display surface, the support system comprising:

- an accessory adapted to support the product for retail display;
- a rear portion, where the rear portion is sized and dimensioned to extend over a portion of the top surface of the metal structure;
- a front portion rigidly connected to the rear portion, where the front portion is sized and dimensioned to extend along a portion of the side surface;
- a magnetic portion rigidly connected to the rear portion; ~~and~~

whereby

the front and rear portions are rigidly connected such that, when the rear portion extends ~~at least partly~~ along the top surface, the front portion extends ~~at least partly~~ along the ~~display~~ side surface;

the front portion is adapted to support the accessory;

when the rear portion extends partly over the top surface, the rear portion is ~~adapted to be supported by the top surface of the metal structure to transfer to the metal structure~~ such that downward loads on the front portion are transferred to the metal structure through the rear portion; and

when the rear portion extends partly over the top surface, the magnetic portion is adapted to be magnetically attracted to the top surface of the metal

structure ~~when the rear portion extends at least partly over the top surface~~
to inhibit movement of the front portion away from the ~~display~~side surface.

Claim 2 (original)

2. A support system as recited in claim 1, in which the front portion extends at substantially a right angle to the rear portion.

Claim 3 (original)

3. A support system as recited in claim 1, in which the front portion is adapted to support at least one accessory on which the product is arranged.

Claim 4 (original)

4. A support system as recited in claim 3, in which the accessory is a wire support.

Claim 5 (original)

5. A support system as recited in claim 1, in which the accessory comprises a shelf bracket.

Claim 6 (original)

6. A support system as recited in claim 1, in which the front portion defines a plurality of slots for receiving tabs extending from the accessory.

Claim 7 (new)

7. A combination of:
a primary product display unit defining a substantially horizontal top surface, a substantially horizontal side display surface, and a substantially horizontal

front door surface, where at least the top surface of the primary product display unit is metal; and

a secondary product display unit comprising

- an accessory adapted to support the product for retail display;
- a rear portion, where the rear portion is sized and dimensioned to extend over a portion of the top surface of the metal structure;
- a front portion rigidly connected to the rear portion, where the front portion is sized and dimensioned to extend along a portion of the display surface;
- a magnetic portion rigidly connected to the rear portion; whereby the front and rear portions are rigidly connected such that, when the rear portion extends along the top surface, the front portion extends along the side display surface;

when the rear portion extends partly over the top surface,

- the rear portion is adapted to be supported by the top surface of the primary product display unit to transfer to the primary product display unit downward loads on the front portion, and
- the magnetic portion is magnetically attracted to the top surface of the primary product display unit to inhibit movement of the front portion away from the side display surface; and

the front portion is adapted to support the accessory.

Claim 8 (new)

8. A combination as recited in claim 7, in which the front portion extends at substantially a right angle to the rear portion.

Claim 9 (new)

9. A combination as recited in claim 7, in which the front portion is adapted to support at least one accessory on which the product is arranged.

Claim 10 (new)

10. A combination as recited in claim 7, in which the accessory is a wire support.

Claim 11 (new)

11. A combination as recited in claim 7, in which the accessory comprises a shelf bracket.

Claim 12 (new)

12. A support system as recited in claim 7, in which the front portion defines a plurality of slots for receiving tabs extending from the accessory.

Claim 13 (new)

13. A method of displaying a product comprising the steps of:
providing a primary product display unit defining a substantially horizontal top surface, a substantially horizontal side display surface, and a substantially horizontal front door surface, where at least the top surface of the primary product display unit is metal; and
providing a secondary product display unit comprising
an accessory adapted to support the product for retail display,
a rear portion,
a front portion, and
a magnetic portion;

rigidly connecting the front portion to the rear portion;
rigidly connecting the magnetic portion to the rear portion;
extending the rear portion over a portion of the top surface of the metal structure
such that
downward loads on the front portion are transferred to the top surface of
the primary product display unit,
the front portion extends along a portion of the side display surface, and
the magnetic portion is magnetically attracted to the top surface of the
primary product display unit to inhibit movement of the front portion
away from the side display surface; and
supporting the accessory on the front portion.

Claim 14 (new)

14. A method as recited in claim 13, in which the step of rigidly connecting the front portion to the rear portion comprises the step of extending the front portion at substantially a right angle to the rear portion.

Claim 15 (new)

15. A method as recited in claim 13, further comprising the step of adapting the front portion to support at least one accessory on which the product is arranged.

Claim 16 (new)

16. A method as recited in claim 13, in which the accessory is a wire support.

Claim 17 (new)

17. A method as recited in claim 13, in which the accessory comprises a shelf bracket.

Claim 18 (new)

18. A method as recited in claim 13, in which:
- the step of providing the secondary product display unit comprises the steps of
- forming a plurality of slots in the front portion; and
- forming tabs extending from the accessory; and
- the step of supporting the accessory on the front portion comprises the step of
- inserting the tabs on the accessory into at least some of the slots in the
- front portion.
